Advisor: Prof. Ron Alterovitz

Thesis: Efficient Motion and Inspection Planning for Medical Robots with Theoretical Guarantees

Designed and implemented robot **motion planning** and **inspection planning** algorithms with theoretical guarantees for surgical robots (**C++** and **templates**). These algorithms allow the robots to successfully navigate around complex environments or patient anatomy using multimodal sensor data. Experimented with both simulation and physical robot systems (**ROS**, medical-image segmentation, registration). Played a major role in writing an NSF-funded proposal.
